

## EXERCISE

Humans and chimpanzees are both primates. Many other primate species are now extinct. The figure shows one suggested relationship between modern humans, some of the other extinct human-like species and chimpanzees. The number by each species indicates the average brain size in  $\text{cm}^3$ .

- Name two homo species that became extinct less than 1 million years ago
- Locate a common ancestor of *Homo sapiens* and chimpanzee
- Locate a common ancestor of *Homo sapiens* and *Australopithecus*
- Determine the time interval in which the *Homo erectus* existed

# SOLUTION
